

## Mapping fields to the SEED database

9/8/2015

Below is a list of the fields that are in the “structured” building table (called BuildingSnapshot) in the SEED database.

- You can name a field anything you want, but you may want to follow the field names in the first column “SEED Structured Table Field Name” in this list.
- If you don’t find a field in the first column for a field in your data, you can give it any field name that you want -- it will be stored in the “unstructured” data field, and can still be used for sorting and filtering.
- When uploading different file types, you should give the same type of data the same field name.

SEED Structured Table Field Name (use this name if possible, but if you need to use a different field name, the program will map your data properly, and you can still sort and filter by those fields)	Potential Source			
	Building list (these are fields commonly found in building lists generated by cities for benchmarking)	Portfolio Manager Custom Report Template field name (these fields are mapped automatically to the SEED field names on import to SEED)	Audit data (these fields may be found in building audit data)	Utility data (these fields may be found in utility data)
Address Line 1	X	Address 1	X	X
Address Line 2	X	Address 2	X	X
